

CASE: RocketSpace

Area: Islington, UK

Products used: Acoustic Panels, Tiles, 3D Pixel

Architect: LOM

Interior Architect: Chiara Cantilena, Chris Pyle

RocketSpace is a global ecosystem for the world's top tech startups and corporate innovators. Their latest workspace in The Angel, Islington, is an ambitious renovation of a derelict cash holding centre, with disused offices, a high-security basement, loading bays and bank vault. The renovation revealed an impressive core of brickwork and blast-proof concrete mixed with coarse stone aggregate. Exposed ductwork, clean lines and metallic features created the perfect utilitarian workspace but also one noticeable problem: sound reverberations throughout the building. The underground areas were especially challenging.

A second BAUX application was used in the meeting rooms. Wood wool BAUX tiles provided excellent sound insulation creating a secluded space for ideas and creative collaboration. Throughout the building, soft, neutral toned BAUX designs coalesce with concrete and brick to create subtle texture variations on a utilitarian theme.

Products used:

Acoustic wood-wool Tiles — Parallelogram, 3D Pixel.

Acoustic wood-wool Panels — Diagonal.
